# 1. Deaths

Angie Hoyt Lyman

43 year old (husband's friend from HS) died of a massive heart attack a few days after getting it. 2 of my good friends in their 60s died of heart incidents after getting it. SIL now has a blood disorder after getting it. 2 friends of my aunt died soon after getting it. Dad's friends had heart attacks but lived after getting it. My close friend almost died and had severe complications after getting it and was told not to get the 2nd dose or she would die. People won't believe some of these were caused by it, but it can't just be a coincidence when that was all they did differently.

Our friend's 98 yr old mother in a nursing home was doing just fine for a lady her age. Then she got the shots, immediately declined and died within the week. A half dozen or so in the same facility also died within that week, including one who died the same day as the shots.

My father in law passed away after two bouts of heart and lung inflammation resulting in removal of 11 and 13 pounds of fluids over two hospitalizations. The first occurred 3 weeks after the second jab. He had an enlarged heart but was extremely stable. The jabs set off the cytokine storm, he should have never been encouraged by his heart doctor to get the mRNA vaccine.

My boyfriend's mother went into a coma 3 days after the Moderna shot from a blood clot in her brain. She died two days later. This was in May of 2021. We know it was from the vaccine but it was not documented as the cause of her death. We asked/begged her not to get it, but she listened to her friend who is a scientist instead. So unfortunate....

My dad's good friend from high school had a brother who was training for a triathlon (tip top shape) and he took the vax and then had a stroke. He took about 8 weeks to get over that and then was diagnosed with brain cancer which ended up killing him. His Dr said it was the vax that ravaged his body.

My Beautiful Aunt was NOT going to get the Vaccine.... Her Doctor said she "NEEDED TO" ... told her she was high risk because of age & weight 😞 I begged her not to get it ..... but BECAUSE her doc said she needed to ... she did 😞❤️ within 2 weeks she died from complications (BUT OF COURSE doctor said it wasn't from the deadly-shot!)

**Jenny Hamrick Nelson**

36 year old male died one week after the vaccine. His family member just confided this to me in a pm because the cause of death in the obituary was vague and I inquired further. Said he was "briefly ill and died in his sleep". The best part is that the hospital ruled it a covid death and said he must have had covid prior to getting the vaccine. Never tested positive though and they didn't do any kind of testing or autopsy to confirm. I was in shock!!!

Like · Reply · Share · 1w · Edited

2

**Kathie Masich**

My cousin healthy, in shape, retired cop, in his 70's died in his sleep a couple of days after his vax. The asst ME came to the house and called it natural causes. No autopsy, no pre existing conditions. I can't believe they are not doing autopsy's if someone dies within days of a vaccine. It is wrong and a disservice because how will we know the truth. Maybe it wasn't from the vax and maybe it was. We will never know.

**Lisa Tippetts**

I had a neighbor pass on the 3rd after getting covid but also had underlining health issues . Not sure of his exact again but early 30s. He was also day 10 from having his test .

So I do believe ppl who have issues take a bigger risk but I also deeply believe it is in gods hands .

I recently got covid and have no health issues . I got body aches and that was about it .

I did lose my taste and smell once I was getting over it but it's the flu y'all . Truly the flu . 3 of us out of 7 in my household got the covid and we're all perfectly fine . Do not get the jab !! This household will not .

My brothers friend is a Dr in Utah County. He's had at least 3 people die in his arms. One lady was asking, "what's happening to me?" And then died. The Dr told the medical examiner to please record the death as a vaccine death. The M.E. said his hands were tied. The state has changed the certificates so the only way to record it was to put it as a Covid death. Makes me mad.

A 15yo boy died within 15 min of getting it, still in the jab center. No media.

Friends neighbor was one of the ones poisoned in San Diego in the early days of the jab. She is still not fully recovered. Was rushed to the ER by ambulance.

Like · Reply · Share · 2w

Trixie states that her mother got the Pf!zer j@b on January 25th and quickly had issues that resulted in more than one hospitalization, followed by death.

1 whole week mum without you, it has been the hardest week of my life, your in my head every minute of everyday, I still dont believe it's TRUE, if only love could bring you back, you'd be back in a heartbeat, I will miss you forever and always, I'm just so thankful I got to hold your wee hand before you left ❤️❤️😞

her body is exhausted shes losing weight by the day over 2st in 3 weeks, vomiting uncontrollably and not fit to walk anymore, just lying there looking out a window at the sky, not able to talk to us anymore on the phone, and I cant even be with her to hold her hand to tell her everything is going to be ok to tell her we all love her that we are all waiting for her to get better to come back home, we are completely lost without her knowing the suffering shes going through it is completely heartbreaking, a woman who has been with me all my life who has helped me grow helped me through sick helped me anytime I needed it and she was there, and now that has been taken away from us that we cant give back to her what she give to us.

We are all broken

Please please pray for my mum 🙏❤️😞

Kathryn Gritton

Just attended my neighbor's funeral yesterday, she and her husband got the jab, her arms were full of blood clots, like my son, who drs wanted to amputate, he didn't get the jab because he already recovered from covid, but he was exposed to medical techs every other day, who were shedding from the jab they were required to have to keep their jobs. Several patients have died at my son's dialysis unit, 4 patients recently died within 2 weeks, they are still trying to kill my son.

I have watched MORE THAN A LIFETIME of deaths occur in ONE YEAR among my friends and family—friends of friends, and loved ones are experiencing some health issues, as well, from being vaccinated. It has been devastating to see adults promote this crap onto our children and teens, and young people. I'm bracing for bad reactions, especially sports teams that are REQUIRED to vaccinate IF they want to play sports. This is insane. I have seen a stroke victim in a public setting(vaccinated) and I have heard mature and seasoned Covid nurses say this is absolutely not right and not true, that Covid isn't filling up the hospitals nor are people dying from ivermectin etc but we know all that. They will NOT get the vaccine and agree with me they've seen more deaths from the vaccinated than they have ever seen in the ER, ever. Doctor of a friend was a vaccine promoter, got the shot, and died two weeks later jogging, heart attack. I have a personal relation that I cannot talk about, dead. My dad is experiencing issues with his nerves worse than ever, he's on statins against my advice, and his neuropathy has returned worse than ever (he actually was better from magnesium supplement from my help) and I'm really really worried about him! A friend of mine had three funerals last two weeks ago, and another three weeks ago, all vaccinated all dead from "natural causes"—and my own brother was sicker than he has ever been couldn't get out of bed for a week. He's regretting the vaccine. I can go on and on.

My very close friends grandmother died two hours after the shot. My own mother had a severe reaction and was horribly sick for days. Our builder got the shot Monday and has been horribly sick since. Yet, people are believing that if you have an adverse reaction, that's proof that your immune system is working. Speaking as a former RN, that is ludicrous!

Re: New Message (sent by contact form at Eric Mout...

I will share. I'm so sorry you and your family are going through this. Maybe this story will save a life. Prayers to you guys. 🙏❤️

## Died From the Shot

My father-in-law was a real father to me. He was healthy and robust and never experienced any heart problems of any kind. He strongly believed he would live for at the very least, another ten years. He had so many plans ahead. All of his parents and grandparents lived that long and he was in excellent health. One of his daughters refused to let him come visit or see any of that portion of the family unless he got the Covid vaccine. Continually, they tried to put fear in him that he had to wear a mask wherever he went. He vacillated from wearing a mask to not wearing one. After so long, he wanted "freedom" to see his grandkids so he, against all of the rest of the family's wishes he got the first Covid shot. He did not feel real well for the first few days after but refused to complain as he knew we didn't want him getting the shot. He got the second shot and said it was his "freedom card." Three days later he called out for help. He was surprised and said, "I think I am having a heart attack." Within maybe, five minutes he was gone. When the EMT's came we told them that he had the Covid shot a couple days ago, and they answered (what is I am sure against regulations), "We have seen a lot of this." All of the family knows it was the Covid shot that took his life. In a sense, he is free now but not the way he expected to be. It was not his time to go.

My wife's uncle had a heart attack a few weeks after the jab. 49 years old. His heart is now compromised and is in very poor condition.

Her cousin also had a walking heart attack at 29 years old after a week of getting cv shot.

And also my brother in laws cousin died 2 weeks after. So sad and heartbreaking.

Like · Reply · Share · 2w · Edited

3

Jamie Cooper

My sister in laws grandparents both got the vaccine and were hospitalized with blood clots. They both passed mere days after getting the second shot.

My sister has a friend who is currently in the hospital on a ventilator, not from covid, but from getting the vaccine. He is young and healthy.

My mom just got the second shot a couple of days ago. She started getting this white puffy spots in her eyes. It started as one but has increased rapidly over the past two days. She has these spots all over her eyes now which are blurring her vision and making it hard to see. She is going to her doctor to see what's going on and if they can help her.

I have a friend from college, male under the age of 30, who got vaccinated and now has major heart problems. He's had heart attack like symptoms multiple times and had to go to the hospital. This started happening after getting the jab.

My brother in law, also male under 30, got the vaccine and has been having heart murmurs ever since. He never had anything like it before the Jab.

They keep saying these adverse reactions are rare, but looking at my pool of people who have been vaccinated, it seems quite common.

1. Friends Father hospitalized right after the shots. Stroke, blood clots, and meningitis. Came through all that to die of brain cancer 2 months later. He was a 70 year old triathlon before the shot.

2. Sisters neighbors son hospitalized immediately after, whole host of medical problems that required ICU a few days after the shot.

3. Nephew had an emergency appendectomy the morning after the shot. Dr. told him no way was it related. Nurse whispered to him the next day that she had seen several such cases.

I would like to add that none of these cases were reported as adverse shot reactions!

2 uncles passed after the 2nd shot. Another family member had fluid in the lungs that needed to be drained. A co-workers child had clots, and another in the hospital with a heart attack. A church member had a heart attack and had to get a pacemaker. 2 acquaintances were pregnant and both lost their babies. A friend of my dad's had tremors and couldn't get out of bed for months and thought she was going to die, still might. A woman at my dad's office got shedding from someone who was waxed and bled for weeks straight. Lots of recurring C cases and even bad flus after the V as well. Those are only people I personally know. I could go on and on about hearing other stories from acquaintances.

**Eric Moutsos** 2h

10 people dead now at Hill Air Force Base (where My husband works) from covid.

3 of them were in in his bay.

9/10 were fully vaccinated

That many deaths at one place and no quarantining?

Why hasn't it been on the news? 🤔 cause they were fully vaccinated? (Only 1 wasn't) why have most of the areas not quarantined?

If you look at Hills stats it says hospitalizations and recoveries and nothing on deaths.

Yet my husband personally knew the 3 that were in his bay and they get sent emails about the people who die.

Vickie Isaac

One woman I know went blind in one eye after the jab.

Another tested positive after the jab. They put her in a c0vid only facility. She did not know where she was.

Whenever I called her she sounded like she had been sobbing.

She told me that she was not sick, not in pain, and was not getting any treatments. After 6 weeks she finished her "quarantine" and was sent back home to an assisted living facility. She died the next day.

Two people I know had their lower legs turn black/blue/red, like a huge bruise.

Almost everyone I know who has been x@x xed is much more cranky or raging. They used to be nice.

Two more stories last week. These are friends of mine. #1 father in hospital 1days after shot. His doctor never mention if your on an immune suppression drug you should not get the shot. Heart valve replacement. Yes the same doctor that injected the shot also gave out the prescription. Almost two weeks in hospital with sepsis. #2 daughter is a heart specialist. Sick immediately after shot. Off work for almost a month. Goes back to work and has the shakes so bad she can't do surgery. And no specialist in her world can seem to figure out how to help her.

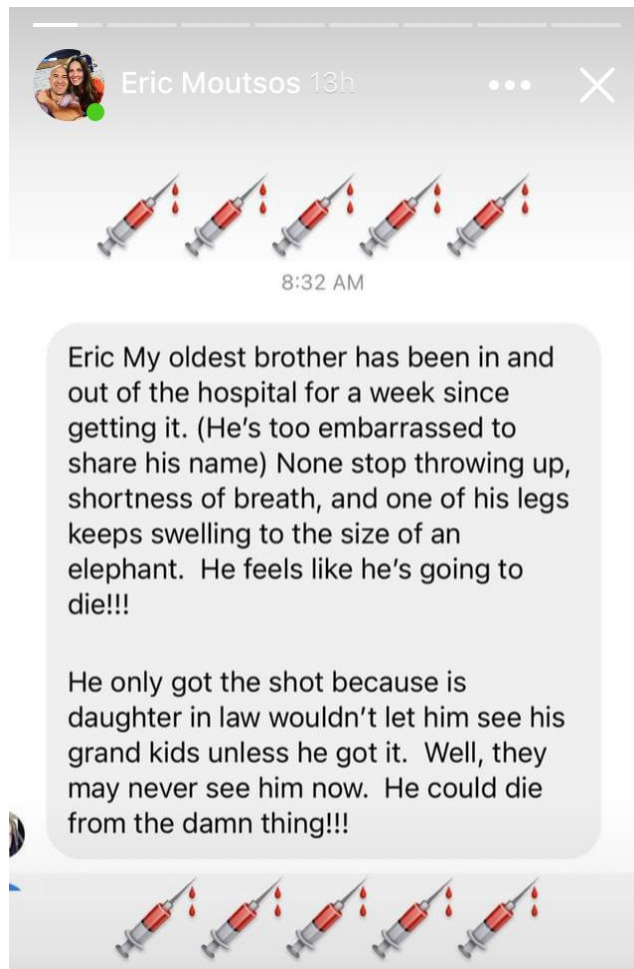

**Margie Green**

I talked to my mother this morning. She is now homebound because she has so many adverse reactions (she calls it, "something wrong with my body"). I sympathized and said I am so sorry, those are awful side effects. She countered with it was just old age. Odd that she was the same age the week before the shots as she is the week after ... But apparently it wasn't the shots. 🤔

I've just heard from a friend with a parent-in-law who had this diagnosis, and a few weeks later her own step-father was given this exact diagnosis.

"Small cell lung cancer spread to all areas of the body, including organs lymph and brain."

Do you know anyone with this diagnosis, in recent months?

**Brittany Fuller**

I met a young man preparing for a LDS mission. It was required in all the other medical things in order did him to serve. When we met, he was very slow at speaking. His entire body trembled. He was pale, and his entire body ached. He was doing all he could, but this had started 2 hours after he got it... and I met him 2 weeks later.

Guy I work with , will remain name less, got the jab, he came to work next morning. Btw has not missed a days work in a very very long time. Was complaining about body aches upset stomach shakes and heart problems. The more active he was trying to be the worst he got. Collapsed in wet concrete. We dragged him out of the pad and checked him over .  
911 called and off he went.  
2 days , he's back at work, and he is not the same guy .  
Has to have eyes 👁️ exam ,  
Trouble breathe n  
Trouble walking  
Trouble talking  
Easy to angry and Violent mood swings.  
Unsteady to finish concrete, shakes way to much .  
Hot/ cold the last couple of days .  
It's been 2 weeks now  
He still has issues .  
He never did b4 the jab. He even has said and his wife.  
But she got the jab too. Was sick 2 days  
She only has had a headaches .

My niece got diagnosed with MS, which came on very suddenly about a month after getting it. No one in her family has it and they haven't said anything about it being caused by it. But getting it more than likely brought it out when she could have lived her whole life or a lot more of it before it manifested. She had had covid 5 months prior.

My 82 YO MIL was heavily coerced by her PC Physician to get the vax in April. This woman was in wonderful health, energetic, happy, had no problem driving... two days after receiving it she started getting dizzy and her head started hurting. This progressed daily with bouts of physical exhaustion. After about two months of this she kept getting blown off by her doc and finally saw another... at that point her neck was stiffening so much she couldn't barely move her head. She got and MRI but it was done on her throat area instead her spinal base where the pain is... can't afford another one.... it is now September and her cloudy head and blurry vision are causing her to need to lay down most of the day and she now walks very slow and has to be supported some of the time.  
For her to decline so rapidly and directly after receiving the vax is concern for all elderly people.

I'm hesitant to say this because it's not me but my sister, I wanted to be respectful, but feel like this should be known. And I'm getting furious at this point.

She ended up in the hospital but didn't tell anyone about it until after she came home.

THIS IS WHAT HAS ME FUMING

She said she had all the 'symptoms' of delta and went to her doctor, of whom she considers to be an intelligent woman. She swears up and down that she's a good person.

I don't see it that way, this so called smart woman needs to be back handed.

She coerced my sister using her children as ammunition, telling her that she's a 'bad mother' if she didn't get the vaccine. My sister loves her children especially the younger one. Thinking about their welfare sge got the vaccine and got severely ill for three days.

My nephew's almost lost their mother cause some witch with a PhD knew that she cares about her children.

Then her doctor strongly advised that she not get the second vaccination.

STRONGLY ADVISED after MANIPULATING my sister by using her CHILDREN.

Let that sink in!

My grandpa developed pneumonia a day or two after his second jab. There was no infection at all. No reason for pneumonia at all. The doctor denied the connection to the vaccine. He did recover but was on a high dose of oxygen at home. He is breathing better now thankfully.

Like · Reply · Share · 2w · Edited

I have been debating on whether or not I should post anything because it's such a controversial subject, but I feel like I have to... If I can shed a tiny light on a situation that I could have avoided, I hope I can help someone else avoid what I'm going through. This post is by no means meant to entice someone else's decision, but simply to say PLEASE DO YOUR RESEARCH before allowing someone to poke you with a foreign substance that could be a life saver, or a life altering nightmare. So here goes: On June 24th I willingly allowed someone to poke me with a jon j (have to use special wording in order to not get blocked or discredited on social media for speaking my truth). I wanted to be able to travel again without worry, to keep my loved ones safe from catching anything, you know all of the things that are constantly pumped into our heads. Walking into the place, my gut told me to turn around and get the hell out of there. I didn't listen. I got the poke, wait 30 min before being driven home. Felt a bit faint, and on the way home noticed my teeth felt numb... and then my cheeks... and then my arms starting tingling. Then the headaches... (mind you I've never had a headache that wasn't related to a self induced hangover). Told not to worry, it's all part of the simple, temporary side effects. My eyeballs hurt, like someone punched me in the eyes... and my vision was blurred and jumping around with double vision. My skin felt extremely hot on my arms like a bad sunburn. I was dizzy, had chest pain and shortness of breath. Petechiae rash on stomach. As the days progressed, I started to feel better with intermittent issues which I hoped and prayed would subside. I started documenting everything on a daily basis via video as I thought I might die... and my go to description of each day was feeling like I had a horrendous hangover with tingling/numbness and extreme joint pain. Fast forward to 3 days ago. The morning was spent at my GP getting bloodwork for my weird issues... then later that day I'm sitting at a car dealership with Tink who was about to purchase a new ride and I started feeling weird... the tingling started in my teeth/gums, went to arms then to my legs. I couldn't talk... couldn't walk... had to lie down in a car dealership with everyone staring at me. Everything sounded like an echo/dream. Finally was able to tell Tink to get me to ER as I thought I was stroking out. Luckily it was across the street. They wheeled me in, started shaking but I wasn't cold... my BP shot up to almost 160/95 (my normal is 110/70) They did EKG (fine) blood work (fine) docs were stumped as to what was going on, and could only suggest that I see a poke specialist and a neurologist for poke induced issues. Finally released and since then have had 2 more episodes but not nearly as severe. I now fear a lifetime of tests and doc visits to try to figure this out so I can live a normal life again as I have not felt good since June 24th. The free poke is going to cost thousands in medical care for me... but all I want is my life back. Moral to my story, please look into the good vs bad on your personal situation before getting this thing... there is so much information out there that is being suppressed regarding the adverse reactions... so you really have to dig to find it. I'm honestly afraid of my future now as this stuff is no joke. Once it's in you, there's no going back... so make damn sure it's worth the risk for you. These "extremely rare side effects" are not as rare as we are being told.

UPDATE: It has been 5 weeks since the poke, and 2 weeks since the ER scare... and I'm finally starting to see more normal hours in a day than not... so I'm optimistic that this trend will continue. I've been dosing up on vitamins/smoothies/pine needle tea/ and doing low impact exercise on good days to keep my blood flowing. Still have the joint pain, burning/temp sensitive skin patches, intermittent headaches/tight chest, but the tingling/numbness sensations have subsided substantially, and those were the most traumatizing issues for me. I want to thank those (sooo many) for reaching out to me with their stories - it helps to give each other hope in that we're not alone.

UPDATE: GP referred me to neurologist with possibly having peripheral neuropathy

David Sharp

I have a family member who was on his front lawn few days after the vaccine and his leg stopped working and he collapsed. After he got inside on his recliner, his leg started shaking uncontrollably. After this he spent a month with severe vertigo... He's absolutely sure it was the vaccine. But he still tells everybody that they should get their vaccine. It's worth the risk.

I am gonna have to disagree. It's not worth the risk

**Andrea Cravinhos Breitenstein**

I think my mom is starting to have some neurological effects. That's bad, since dementia runs on her side of the family. I warned her... But what happened to her is that, 3 days after she got her second jab, she flew to the east coast to visit her family. While there, for literally no reason at all, her knee gave out while she was just standing there minding her own business.

Down she went, smashing her knee and falling to the floor. She had to walk with a cane and then a brace, came home and did physical therapy, and now is supposedly okay. I don't know, since she has some autoimmune issues too, I don't expect it to go well for her over the next few years.

And now she's wanting to go in on a home, her, and us. There's no way in hell I'm going to agree to that if she doesn't stop getting those damned jabs! I tried lovingly warning her. I tried sternly warning her. In the end, she gave in to fear but quieted the promptings of the Holy Ghost, which tried to warn her that this was dangerous, by convincing herself that it would be okay since the Prophit did it and she went and got a blessing, though the blessing apparently did not mention the jab at all.

I'm at the point where I'm just telling her that I'm not screwing around, and since I'm no weakling, I'm not going to give in if she's going to put my and our health in jeopardy.

I know she's my mom, but I'm also her daughter and she should have more consideration for my terrible autoimmune issues. And her own health! I already told her that I can't be around her due to shedding but she doesn't seem to believe me. Well she's going to get the message real soon, I'll tell you. If it's one thing my family should know by now, is it I don't F around. I've cut off family members before for nearly 15 years at a time, to get away from toxic, narcissistic, psycho abusive behavior. I did it before, and I'll do it again.

I am immune compromised. First shot not even a sore arm. Second dose went straight to my lungs. I thought I was having a PE but my O2 stays were not critical like when I had a PE. I had a very hard time breathing and was extremely short of breath. Body aches like flu for a week.

Like · Reply · Share · 2w

Amanda Tobler Griffith

Another friend's mother had severe high blood pressure right after the shots. Terrible headaches. Then it turned to blood gushing from her nose. She'd never had a nosebleed before. Went to the ER, they told her to go home & relax. The nose bleed worsened, and then blood started coming out of her ears and eyes. Back they went. This is a 100% true story that happened a month or two ago here in Utah. Yet no one wanted to blame the shots even though she'd just received them.

**Brandy Jessop** I know of a 23 yr old who had a heart attack after the jab. Good thing his dad is a doctor and saved him!

My FIL got myocarditis. Now he's on all kinds of meds. My friends husband had a heart attack in Costco shortly after his 2nd injection. Ended up in ICU and had a stint put in. He's been back in the hospital several times since. No other health problems before the jab.

My father has protein in his urine and a new heart murmur after the jab.... He hasn't done any digging to see if it's related- anyone else seen this?

I have an old classmate I grew up with in California. He was shouting on FB to get the vax and he did, as he said he wanted to be a "good" guy and help protect others from getting sick ect blah blah blah. He is now suffering from an enlarged heart is suffering because of it. As he is now a medical MESS he is shouting now and warning against ANY VAX for C-19. Its very sad. he WAS heathy 58 year old and not sure if he will survive now.

My cousins dad had his 2nd injection and hadn't felt well for 2 weeks after, he had a massive heart attack while sleeping, luckily he had an alert system connected to his c-pap machine, EMTs sent to his home and he was rushed to the ER where he underwent a quadruple bypass and remained in the hospital with complications for 2 months! Happy to report he made it and is now home!

A friend is now experiencing heart inflammation and inflammation of her blood vessels a few months after the JJ. She has had stroke level BP. Her cardiologist has no explanation as to why but reprimanded her for questioning if it was a side effect or not

**Sammie Case**

**Joann Spence Brinton** My mom had a full check up in January in March she got the shot. She now has a heart complications along with other symptoms, that needs surgery. We just found out today. I want the cardiologist to help us start a lawsuit using the scans from January to compare with the scans from today.

**Stella Gartz**

**Sammie Case** my father in law has clean bill of health from his health check last year. He has a little high blood pressure issue and was taking the medication for it. He is big supporter of vaccines. He got the jab last January, he just had a heart attack 3 weeks ago. He had blood clot in his arteries which was really surprising. I think it caused by the jab, but we can't tell him that! He will not believe anything we say! He is lucky that he got into the hospital quickly. He is recovering now at home.

A young, female LDS missionary has been hospitalized in California, with heart damage, from the injection she did not want, but was coerced into taking, against the counsel of her mother.

If you push this on others, you are accountable before God for the suffering you cause. Every bit of it.

My Mom's bf got super sick after taking the second dose of the Moderna vaxx. He almost had to go to the hospital. My Uncle took the Moderna vaxx and (not sure if he took one or both doses when this happened) he had a heart attack. My family said it wasn't b/c of the vaxx (...sure it wasn't 😞😞 They all took it and think I'm a crazy conspiracy theorist for not taking it), but I know it was the vaxx that caused it to happen. He's doing much better now. Praying him and the rest of my family don't take anymore of this poison shots 🙏🙏

# 6. Blood Clots

John B. Horsley

My older brother, 74 years old, got the first shot and a few days later had chest and shoulder pain severe enough that he checked into the VA hospital for help. The doctor that worked on him found blood clots in his lungs and advised him not to get the second shot!

My grandpa was hospitalized with blood clots in his lungs after he received the vaccine. Thank goodness he caught it. Felt like he couldn't breathe for days and finally went in to get checked out.

Like · Reply · Share · 3d · Edited

Shauna Haddock

A close family member of mine ended up in the ER with blood clots covering his lungs and heart problems. Doctors say it's a miracle he made it. This was, I believe 6 weeks post vaccination. He had the Moderna, so I'm not sure if it was after his first or second as far as the timeline goes.

A good friend of mine got the injection then immediately started to feel bad. He's now developed blood clots in his lungs. He can hardly breathe and they've put him on a phizer to thin the blood but it's not working. He wants to change meds but it'd backorder. He can't keep any food down and he can't breathe.

Let's see may I count the people

I know

Mother-in-law mini-stroke, now full disclosure, she is 94 lived on her own since 1986 healthy dairy farmer. She had a mini-stroke 9 weeks ago is now living in an assisted living facility.

A co-worker has to have heart surgery

Co-worker onset dementia is bad!

Neighbor 2 strokes and seizure.

Co - worker right side of the face paralyzed.

A co-worker has been sick ever since the 🦠 another co-worker got a staff infection at the 🦠 sight. that's just in my circle. I have 3 serious autoimmune diseases that I am on treatments for. Team of 5 doctors. 3 out of the 5 have said wait there is not enough data for you to put yourself at a potentially deadly outcome.

I have two family members that suffered mini strokes a few weeks after receiving the shot. They and their doctors don't think it's related, but I am suspicious. I have 2 other family members that experienced severe rash all over their bodies right after the first shot, they opted out of the 2nd shot.

I know 5 people that have had "weird" heart issues such as racing heart to heart attack in a (21 yr old) but of course none of it had anything to do with the jab. I also know of several older people that have had strokes. One survived. I know at least one of those were jabbed, but I suspect more. You just don't hear about that many people especially in such a short period of time having strokes. Just heartbreaking...

Like · Reply · Share · 1w · Edited

# 8. Menstrual Issues

**Harrison Salisbury**

My uncle got his first stroke right after the shot. My friend just messaged me telling me that someone on their street up in Heber spent last week in the hospital in Provo with blood clots in their brain after the jab . She was 24

Too many other examples to list from many of my patients. Of course I hear all the same bleeding and menstrual issues with females

**Bree Lazenby Watson**

There are thousands of un v@ xx ed women like me that are having horrible menstrual irregularities just from being around those that got the 🦠. Sorry for the TMI but I have been bleeding more days than not since February 17th.

You would not believe the attacks I have had directed at me. (#) believeher doesn't apply to women that talk about this kind of adverse reaction.
